Your 4-week Cyborg Migration

The week-by-week checklist and the starter template. One small step a week. No tech skills needed.

MIGRATION 3/3

Thanks for signing up. This page is yours: bookmark it, or keep the PDF version.

The whole idea fits in one line: *My memory. Any mind. Closed loops.* One place for your life that **you** own, any AI plugged into it, and a weekly look back that makes next week a little better.

You don't need to finish everything. Ticking one box a day is enough.

Week 0: Notice (5 minutes)

- [ ] Write down **three things you keep forgetting, redoing or losing track of.** The fix you can never remember. The goal that keeps slipping. The thing you always have to look up again.
- [ ] Keep the list somewhere you'll see it. It's the first thing that goes into your memory.

Week 1: Memory (migration 1/3)

Get your life into **one** place. A notebook app, a spreadsheet, or the starter template below all work. What matters is that it's one place and that it's yours.

- [ ] Set up the eight sections from the starter template (it takes about ten minutes).
- [ ] Add your **three things** from week 0.
- [ ] Add **one to three goals** for the next few months, each with a sentence on *why* it matters.
- [ ] Add the projects or plans that serve those goals.
- [ ] Write **two "how I fixed it" notes** for things you've solved before.
- [ ] Add the people you're working with or owe something to.
- [ ] Optional: add your money categories and one budget.

Week 2: Processing (migration 2/3)

Connect an AI to that one place, so it can read and write there instead of keeping its own memory.

- [ ] Pick your AI. Any assistant that can connect to your notes or database works. You can swap it later and your memory stays put.
- [ ] Give it access to your place, using a key you can take back at any time.
- [ ] Save the **capture recipe** (below) and use it once.
- [ ] Save the **weekly review recipe** (below). You'll use it in week 4.
- [ ] Ask it one real question about your life, and check that the answer comes from your notes, not a guess.

Week 3: Live (practice week)

Run every day through it for seven days. Don't aim for perfect; aim for every day.

[ ] Day 1: capture something you'd normally forget.

[ ] Day 2: ask "what should I focus on today, given my goals?"

[ ] Day 3: when you fix something, save a "how I fixed it" note.

[ ] Day 4: before talking to someone, ask what you last discussed or promised.

[ ] Day 5: ask a money question you'd usually avoid.

[ ] Day 6: update one project: what's done, what's next.

[ ] Day 7: rest. Just glance at what got captured this week.

Week 4: Loop (migration 3/3)

Your first honest weekly review, built from the record, not from your memory of the week.

[ ] Run the **weekly review recipe**.

[ ] Keep one thing that worked: save it as a recipe or a note.

[ ] Turn one thing that went wrong into a lesson in your notes.

[ ] Set next week's top three, linked to your goals.

[ ] Put the review in your calendar, every week, same time.

After four weeks you'll have your own data to judge this by. That's the point.

The starter template

Eight sections. Every entry has the same shape: a **title**, a free-text **context** (what, why, details), a **date**, and whether it's still **active**. Keeping every section the same shape is what lets any AI read all of it without special setup.

SECTION	WHAT GOES IN IT	LINKS TO
Goals	What you want in the next few months, and why	Projects

SECTION	WHAT GOES IN IT	LINKS TO
Projects	Plans that serve a goal, with a status (planned, doing, reviewing, done)	Goals, tasks, notes
Tasks	Single steps, with a due date and a priority	Projects
Notes	"How I fixed it", how-tos, things you've learned	Whatever relied on them
People	Who you work with, what you discussed or promised	Projects, notes
Money	Spending, income, and one or two budgets (optional)	Goals
Recipes	Your saved ways of doing things: the capture and review recipes, meeting prep	Everything
Diary	One line per thing that got done, and who did it (you or the AI)	Everything

Two rules make it work:

1. **Link work to what it relied on.** When a task used a note, link them. Later you can ask "what did I base that on?"
2. **"Reviewing" is a status, not a wish.** A project goes doing → reviewing → done. It can't skip the review.

Recipe 1: capture

Save this as a recipe (a saved prompt) in your AI:

> Here's something I want to remember. Decide which section it belongs to (goals, projects, tasks, notes, people, money). Write it with a short title and a context that explains what and why. Link it to anything related that already exists. Then add one line to the diary saying what you saved.

Recipe 2: weekly review

> Run my weekly review from the record, not from guesses. Read this week's diary, finished tasks and updated projects. Tell me: what got done, what slipped and why, and which goal each item served. Suggest one thing to keep as a recipe and one lesson to save as a note. Propose my top three for next week, linked to my goals. Ask before writing anything.

Keep it safe

- Your place stays yours. The AI gets in with a key you control, and you can take it back at any time.
- Keep passwords and sensitive money details out of what the AI can read, or behind a separate key.
- If an AI answer sounds confident but isn't from your notes, ask it where it got that from.

Follow the build

I'm doing the same four weeks in public, one video and one post a week. Each step shows how I set it up, what went wrong, and what I changed.
